AC Servo System

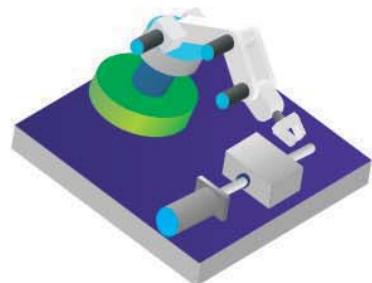

Features

Complete Functionality

Suitable for wide variety of applications

- ◆ Modbus communication control
- ◆ Position/Speed/Torque modes
- ◆ Dual control modes
- ◆ Internal single-axis position control
- ◆ PG dividing ratio output
- ◆ Protection function
- ◆ Multi-groups of electronic gear
- ◆ External JOG function
- ◆ Speed / Torque limit operation
- ◆ Flexible digital inputs / outputs
- ◆ Onboard numeric display and keypad
- ◆ Fault display

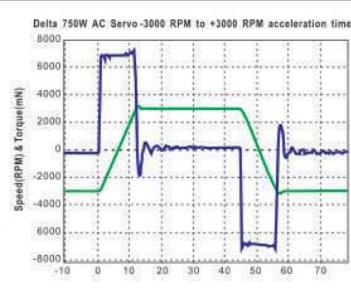

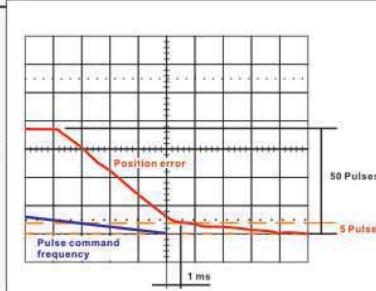

Excellent Performance

High speed DSP !

Rapid performance achieved !

- ◆ Motor settling time below 1ms
- ◆ Speed responsiveness characteristic: 450Hz
- ◆ Great stability and performance at low speed: less than 0.5% error at 1 rpm per rotation
- ◆ 10ms accel. time from running without load -3000 rpm to 3000 rpm

Powerful Position Control Function Built-in

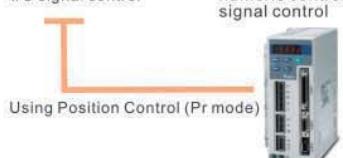

Eliminate External Controller

- ◆ Point-to-Point single axis control
- ◆ 8 internal memorized position settings
- ◆ Move to Home function
- ◆ Position teaching capability
- ◆ Absolute and Incremental encoder
- ◆ User-definable Accel. / Decel. Curve
- ◆ Feed step control function
- ◆ Internal auto-running control mode

DVP-ES
I/O signal control

DVP-EH
numeric controller
signal control

Using Position Control (Pr mode)

Smoothing Strategy

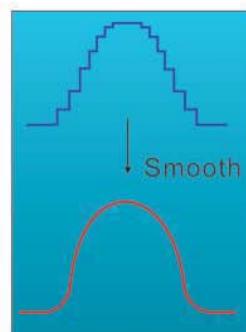

S curve profile for speed mode

P curve profile for position mode

In position / Speed mode, smoothing curves are provided for stability improvement with high accuracy.

Using smoothing curves can run the motor more smoothly in response to a sudden operation command. Efficiently improve machinery performance and extend the life of machinery system.

When operation commands are suddenly changed, the user can use smoothing curves to achieve continuous and stable performance no matter the motor is accelerating or decelerating.

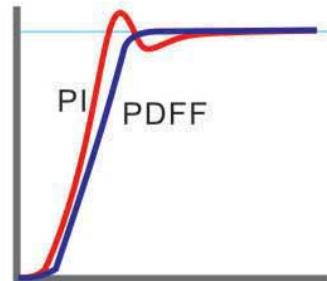

Tuning Technology

Robust for high speed load inertia change

Easy Mode

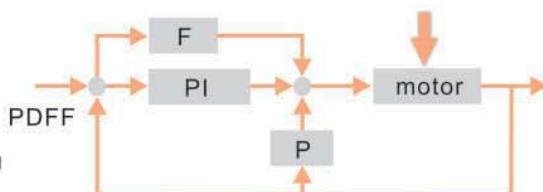

Robust control for continuous and wide range of load inertia change, with 16 levels of system stiffness and responsiveness

Auto-tuning for low speed load inertia change

Auto Mode

Auto-tuning control for loop gains adjustment according to measured external load inertia, with 16 levels of system responsiveness. Easy to find the correct inertia value and meet the requirements of high precision and high responsiveness.

Flexible and competent for belt and screw transmission mechanism

PDFF Mode (PDFF Pseudo-Derivative Feedback and Feedforward)

Only enter speed responsiveness, and it can set the corresponding internal parameters automatically according to the measured load inertia value. Faster responsiveness with no overshoot and better suppression and compensation capability against interference and noise emission.

Modbus Communication

Built-in RS-232 / RS-485 / RS-422 interface

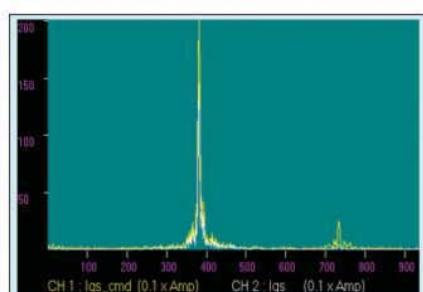

Direct connectivity to the control equipment and communication interface provides effortless and versatile operation. Capable of multi-axis synchronous connection and qualified to accomplish monitoring control, I/O access and reading/writing parameters.

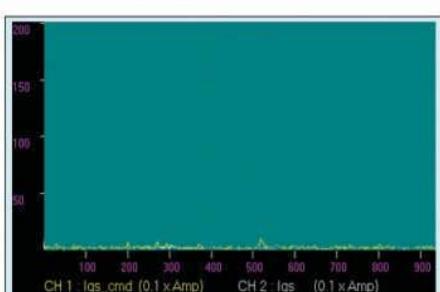

Resonant Suppression Capability

Superior resonant suppression capability enhance system responsiveness

Loss pass and notch filters can efficiently suppress and control the mechanical resonant and in the meantime make the machinery system work normally when system responsiveness is still very high.

◀ Current waveform
before resonant
suppression

◀ Current waveform
after resonant
suppression

AC Servo System

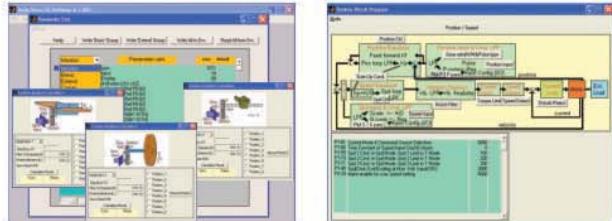

Features

Window based Software

Operation is child's play.

Parameter management

- ◆ Clear parameters classification. Easy to view
- ◆ Detailed parameters explanation. Easy to understand.
- ◆ Real-time parameters setting. Fast and convenient.
- ◆ Complete read and write function

System Block Diagram

- ◆ Quick and simply to understand system structure
- ◆ Promptly acknowledge the relevant parameters in different control mode

Calculation Tool

According to the mechanical moving distance calculate the corresponding internal pulse number automatically

Many auxiliary functions

Software selectable virtual I/O

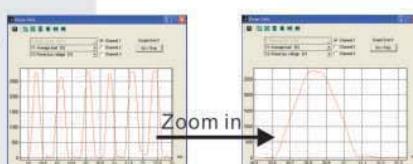

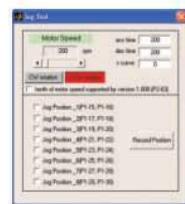

User-definable I/O points
Virtual software "I/O switch"button

JOG mode and Position

Teaching function

Reach and save the user-desired position through JOG operation..

Drive all status monitor function available.

Single-axis Control Function

Feed step control

PC-based controller and PLC can achieve feed step control, torque auto reduction and position error clear function via communication or DI/DO signals. Feed step control function can greatly reduce the power consumption and improve the motor overheat problem caused by the mechanical engagement error during positioning.

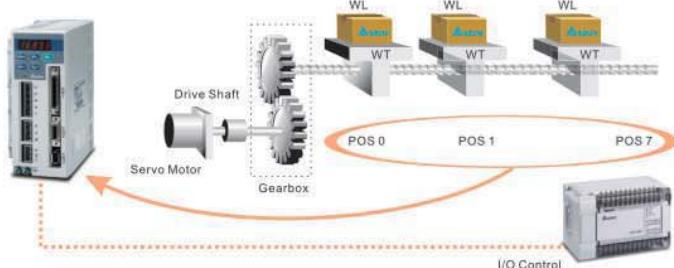

Main applications: Turret control machinery, Cutting tool processing, feeding and assembly system

Single-axis positioning control

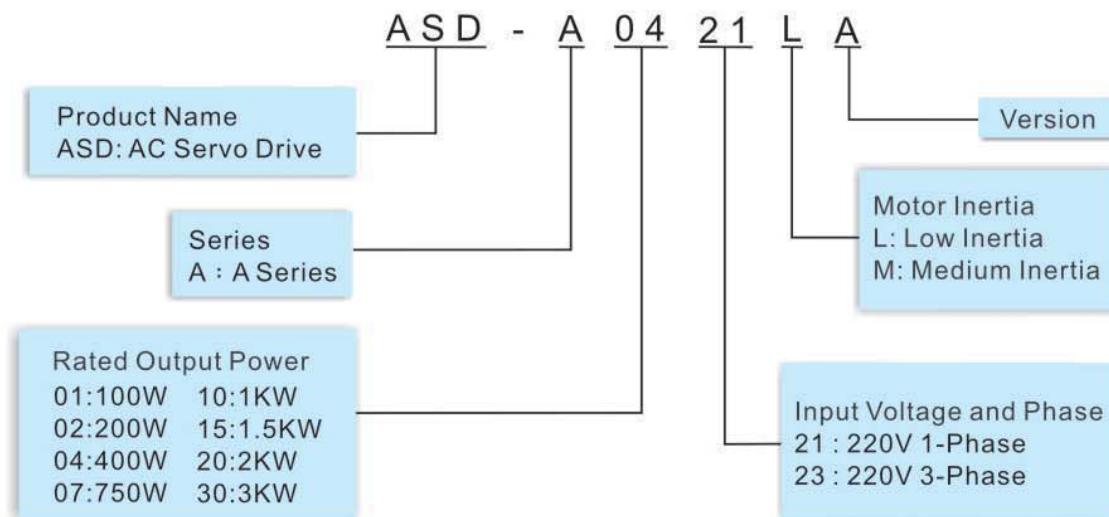

Built-in 8 position commands and 8 corresponding moving speed settings. When using communication control, it can change internal command and moving speed dynamically.

Position control with unlimited numbers of points via communication is possible.

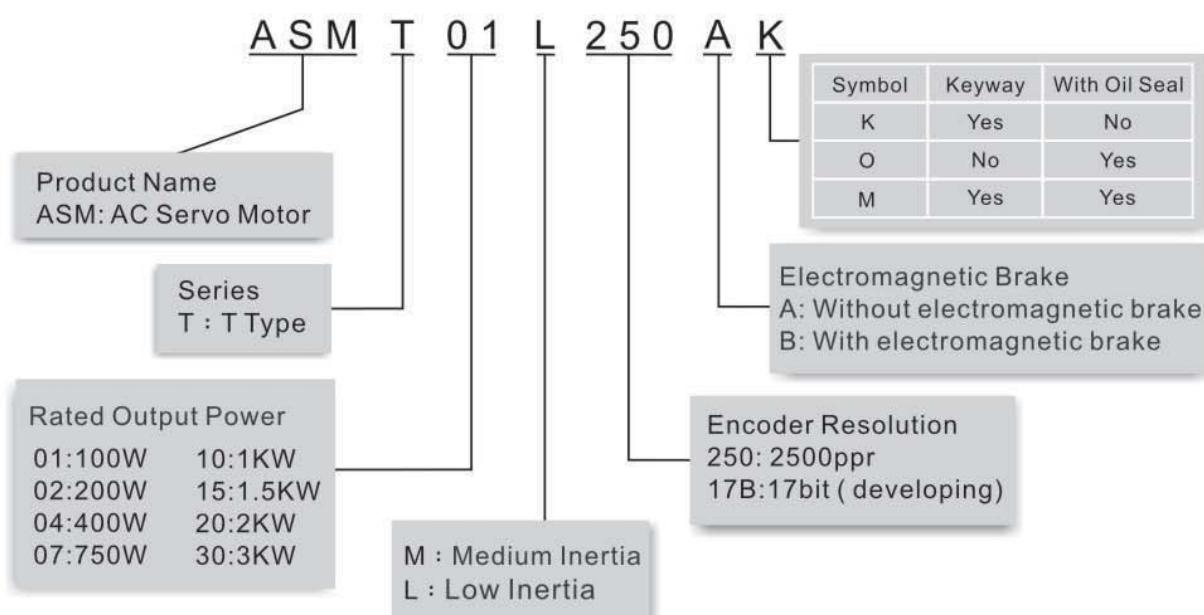

Model Explanation

Servo Drive ASDA-A Series

Servo Motor Series

AC Servo System

Configuration

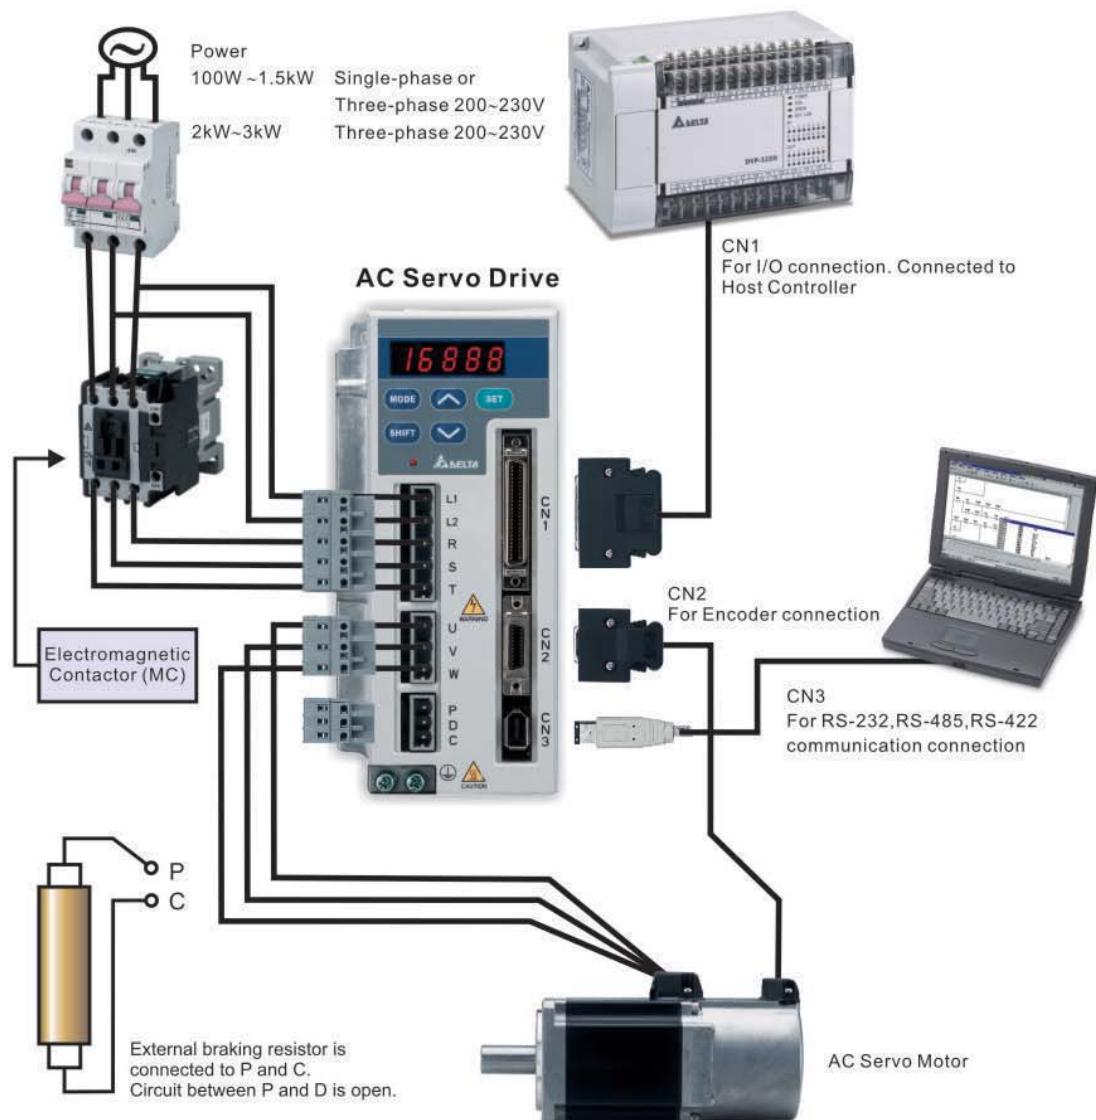

Servo Drive and Servo Motor Combinations

Note: The boxes(□) at the ends of the model names are for version or options.

System Configuration

Note:

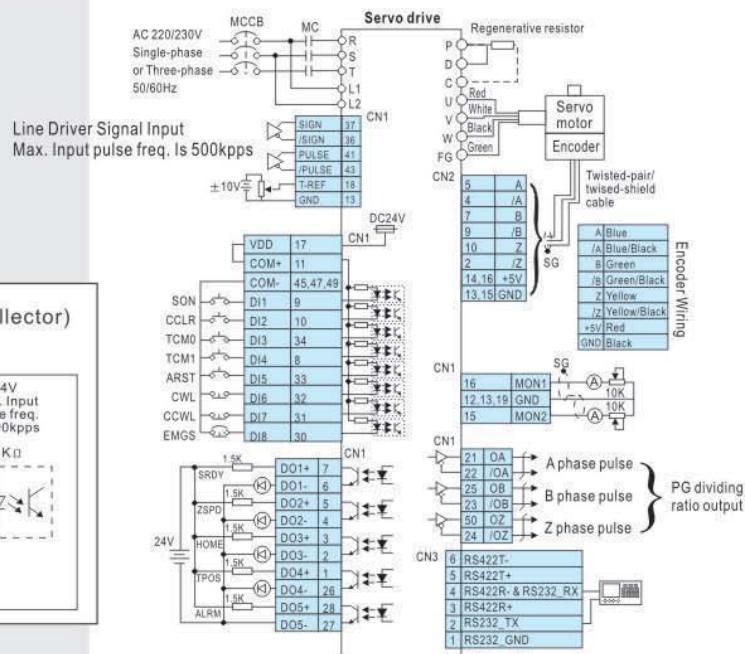

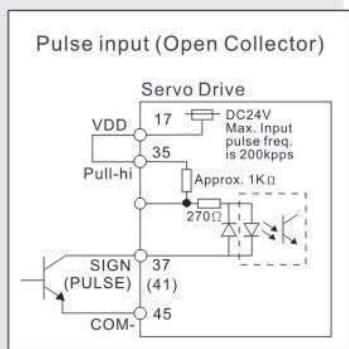

1. Check if the power supply and wiring of R,S,T and L1,L2 is correct.
2. Check if the wiring of U,V,W is correct.
3. When using external regenerative resistor, make sure the circuit between P and D is open.
When using internal regenerative resistor, make sure the circuit between P and D is close and the circuit between P and C is open.
4. If an alarm displays or an emergency stop occurs, turn the electromagnetic contactor off by using ALRM output to force the motor to stop.

Specifications

Servo Drive Specifications (ASDA-A Series)

Model: ASD-A□□□□□□□		01	02	04	07	10	15	20	30					
Power Supply	Voltage / Frequency	Three-phase or Single-phase 220VAC		Three-phase 220VAC										
	Permissible Voltage Fluctuation	Three-phase: 170~255VAC Single-phase: 200~255VAC		170~255VAC										
Position Control Mode	Permissible Frequency Fluctuation	50 / 60 Hz ±5%												
	Cooling System	Natural Air Circulation		Fan Cooling										
	Encoder Resolution /Feedback Resolution	2500ppr / 10000ppr												
	Control of Main Circuit	SVPWM Control												
	Tuning Modes	Easy / Auto / Manual												
	Dynamic Brake	Built-in												
	Max. Input Pulse Frequency	Max. 500KPPS (Line driver) / Max. 200KPPS (Open collector)												
	Pulse Type	Pulse + Direction, A phase + B phase, CCW pulse + CW pulse												
	Command Source	External pulse train / Internal parameters												
	Smoothing Strategy	Low-pass and P-curve filter												
Speed Control Mode	Electronic Gear	Electronic gear N/M multiple N: 1~32767, M: 1:32767(1/50< N/M <200)												
	Torque Limit Operation	Set by parameters												
	Feed Forward Compensation	Set by parameters												
	Analog Input	Voltage Range	0 ~ ±10 VDC											
	Command	Input Resistance	10K Ω											
		Time Constant	2.2 μs											
	Speed Control Range	1:5000												
	Command Source	External analog signal / Internal parameters												
	Smoothing Strategy	Low-pass and S-curve filter												
	Torque Limit Operation	Set by parameters or via Analog input												
Torque Control Mode	Frequency Response Characteristic	Maximum 450Hz												
		0.01% or less at load fluctuation 0 to 100% (at rated speed)												
	Speed Fluctuation Rate	0.01% or less at power fluctuation ±10% (at rated speed)												
	Analog Input	Voltage Range	0~±10 VDC											
	Command	Input Resistance	10K Ω											
		Time Constant	2.2 μs											
	Permissible Time for Overload	8 sec. Under 200% rated output												
	Command Source	External analog signal / Internal parameters												
	Smoothing Strategy	Low-pass filter												
	Speed Limit Operation	Parameter Setting or via Analog input												
Digital Input/Output	Analog Monitor Output		Monitor signal can be set by parameters (Output voltage range: ±8V) Servo On, Reset, Gain switching, Pulse clear, Low speed CLAMP, Speed/Torque limit enabled, Emergency stop, Forward / Reverse inhibit limit, Pulse inhibit input, Forward / Reverse JOG input											
	Input		Internal parameter selection, Torque limit activation, Speed limit activation, Control mode selection (Position / Speed / Torque mode selection, Dual mode selection), Feed step control mode, Internal auto running mode, Electronic gear ratio selection											
	Output		Encoder signal output (A, B, Z / Line Driver) Servo ready, Servo On, Zero speed, Speed reached, Positioning completed, Reached torque limits, Servo alarm output (Servo fault), Electromagnetic brake, Home completed											
	Protective Functions		Overcurrent, Overvoltage, Undervoltage, Motor overheated, Regeneration error, Overload, Overspeed, Abnormal pulse control command, Excessive deviation, Watch dog execution time out, Encoder error, Adjustment error, Emergency stop activated, Reverse/ Forward limit switch error, IGBT temperature error, Memory error, DSP communication error, Serial communication error, Input power phase loss, Serial communication time out, Command write-in error											
Environment	Communication Interface		RS-232 / RS-485 / RS-422											
	Installation Site		Indoor location (free from direct sunlight), no corrosive liquid and gas (far away from oil mist, flammable gas, dust)											
	Altitude		Altitude 1000m or lower above sea level											
	Atmospheric pressure		86kPa to 106kPa											
	Operating Temperature		0°C to 55°C (If operating temperature is above specified range, forced cooling will be required)											
	Storage Temperature		-20°C to 65°C											
Terminals with Short Circuit Protection	Humidity		0 to 90% (non-condensing)											
	Durability of Vibration		9.80665m/s² (1G) less than 20Hz, 5.88m/s² (0.6G) 20 to 50Hz											
	Power System		U, V, W, CN1, CN2, CN3											
Standards/Requirement		TN System												
		IEC/EN 61800-5-1, UL 508C, TUV, C-tick
